

MPG

version 1.0 for iPhone

About MPG

For over 14 years MPG has been helping vehicle owners take better care of their cars, trucks, motorcycles, RVs, boats...

MPG is a log book for your car. It replaces the little notepad in your glovebox with an intelligent tracker. It tracks fuel, oil changes, tune-ups, inspections, tire rotations, windshield wipers, car washes, trips, and other miscellaneous expenses for your car.

- Track fuel, trips, and services.
- Service reminder to nag you to change your oil, get the car inspected, or whatever you want to setup.
- Reports generate statistics such as average miles per gallon, total cost of gas, and average price of gas. Fuel economy is calculated for the fuel entries. Time, distance and time per distance are calculated for trips.
- Email trip log to be reimbursed for travel.
- Use SyncDocs to backup, restore, import, and export data over a Wi-Fi connection. MPG for Palm OS data files can be imported. Tab delimited text files can be imported or exported to a spreadsheet. (User must download SyncDocs separately.)
- After you enter a transaction into MPG, you can post the transaction to PocketMoney to save yourself time by ending the need to do double data entry. (PocketMoney is available on the AppStore)
- US, Metric, UK, and Canadian units are supported.

1. Vehicle List Screen

The first time you launch MPG it will open to a blank Vehicle List Screen.

Tap the New vehicle button to create a new vehicle to track.

Edit Button: Switches the screen to the standard iPhone Editing screen. Tapping the red circle lets you delete a vehicle. Tapping on a vehicle name will open the Vehicle Info Screen.

Preferences button: Opens the MPG Preference screen.

Vehicle Info button: Opens the Vehicle Info Screen for that vehicle.

Vehicle row: Tapping on the Vehicle name will open the Vehicle Log screen for that vehicle.

New vehicle button: Creates a new vehicle and opens the Vehicle Info Screen.

Action button: Opens the Wi-Fi File Transfers action sheet.

2. Vehicle Info Screen

Vehicle Info Screen is where you set general settings for a particular vehicle.

Back button: Returns you to the previous screen.

Edit photo button: Opens the image picker choice sheet. If your device has a camera, then you'll be able to take a picture. If you device has the Photo application installed, then you can pick from your existing pictures you have sync'd down to the device.

* If you "Choose Existing Photo", then it might display the image you pick upside down. This seems to be a bug, to work around this rotate the image upside down in iPhoto, then when you pick it, it will display right side up. This isn't an issue if you use the camera to take a new photo.

Vehicle name field: This must be filled in when you create a new vehicle. This name is what is displayed on the Vehicle List and Vehicle Log screens.

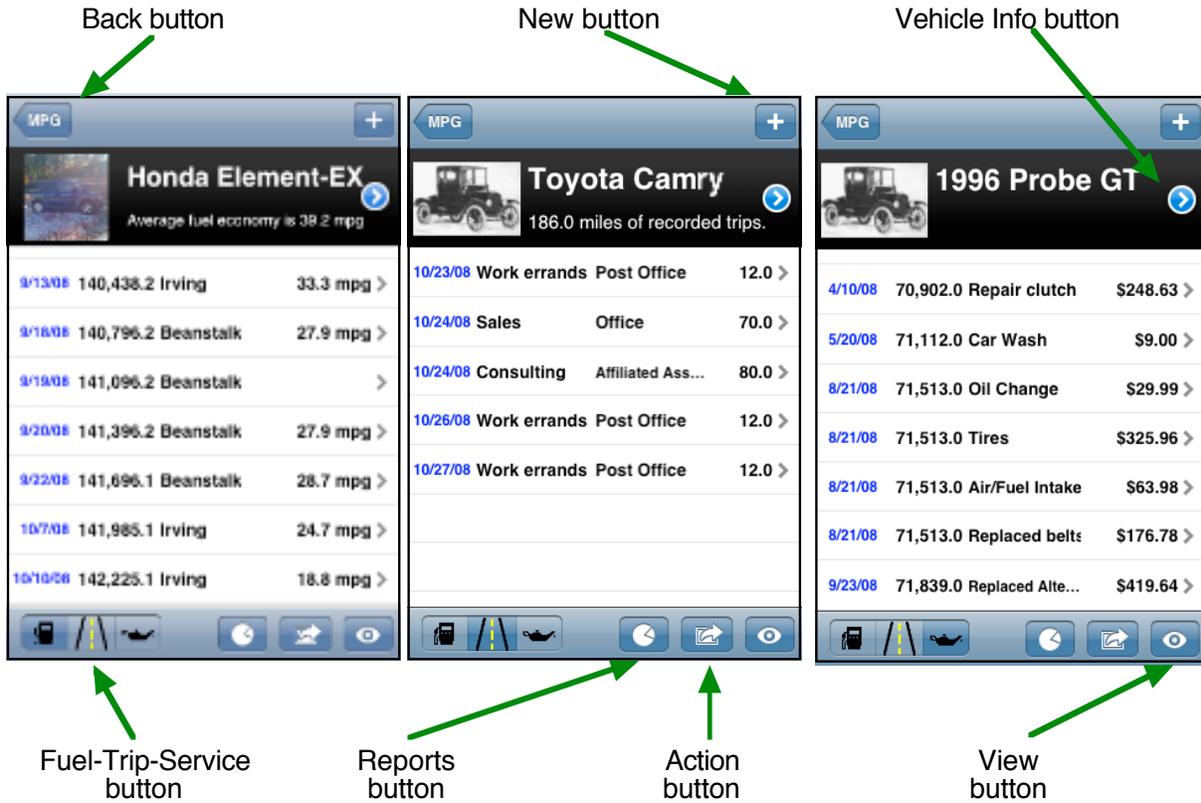

Service Reminders info button: Tap the blue arrow to open the Service Reminders screen where you can create, modify, and delete service reminders.

Service Reminders Display Reminders Switch: If you have service reminders created for the vehicle, but you do not want the reminder popups to be displayed when you launch MPG then turn this to OFF.

Additional info fields: These field are optional and are here for your convenience.

3. Vehicle Log Screen

Tapping on a vehicle in the Vehicle List screen opens the vehicle log screen. There are three different displays depending on if you are looking at Fuel, Trips, or Services.

Back button: Returns you to the previous screen.

New button: Creates a new vehicle log entry based on which log you are displaying.

Vehicle Info button: Opens the Vehicle Info Screen.

Fuel-Trip-Service button: Toggles between the Fuel Log, Trip Log, and Service Log screens.

Reports button: Opens the Reports Screen.

Action button: Opens the Wi-Fi File Transfers action sheet. This also includes the E-mail option so you can email the vehicle log.

View button: Opens the View Options Screen. You can set a date range to limit the transactions you are viewing so that you can email a trip log for the last 5 days to your accounting department to get reimbursed.

4. Edit Fill-up Screen

Tapping the New button on the Vehicle Fuel Log screen will create a new fuel entry and open the Edit Fill-up screen.

Save: Saves the transaction and returns you to the previous screen.

Cancel: Cancels any edits you've done and returns you to the previous screen.

Date: Date of fill-up. Tapping the Date label or > will open the Date Picker.

Odometer: Odometer of fill-up, and the distance since the last fill-up. Tapping the Odometer label or > will open the Distance Picker.

Payment: Payment type. Turn the display of this field off in the View Options if you don't track the payment type. If you use PocketMoney for your personal finance application, then the payment type corresponds to the account name in PocketMoney for when you Post the Transaction to PocketMoney. Tapping the Payment label or > will open the Payment Picker.

Location: Where you bought fuel. Tapping the Location label or > will open the Location Picker.

Amount: The amount you paid for the fuel. If you enter the gallons and cost/gal, then this field will be automatically calculated.

Cost/Gal: The cost per gallon for the fuel. Turn the display of this field off in the View Options if you don't track the Cost/Gal. If you enter the amount and gallons, then this field will be automatically calculated.

Gallons: The number of gallons you put into your vehicle this fill-up. If you enter the amount and cost/gal, then this field will be automatically calculated.

Filled Tank: Turn this ON if you completely filled up your tank. Switch this to OFF if you didn't fill your tank up completely. MPG won't display the fuel economy on tanks that you didn't completely fill up, but will include the volume and distance to calculate the fuel economy of the next full tank.

Fuel Type: Better known as Octane, but with diesel, bio-diesel, 10% ethanol, and a variety of other fuel types out there, MPG uses the generic Fuel Type for this field name. Tapping the Fuel Type label or > will open the Fuel Type Picker.

Notes & Class: Optional fields. You can turn their display off in the View Options.

Last mpg & current mpg: The fuel economy for the last tank and the current tank of fuel.

++ Duplicate button: Duplicates the current fuel entry.

\$ Post to PocketMoney: Post the current transaction to PocketMoney saving you the hassle of entering the transaction twice.

View Options: Opens the View Options screen where you can toggle the display of the Payment, Notes, Class, and Cost/Gal fields on or off.

Trash Can: Deletes the current entry.

5. Edit Trip Screen

Tapping the New button on the Vehicle Fuel Log screen will create a new fuel entry and open the Edit Fill-up screen.

Save: Saves the transaction and returns you to the previous screen.

Cancel: Cancels any edits you've done and returns you to the previous screen.

Date: Starting date/time of trip. Tapping the Date label or > will open the Date Picker.

Ending: Ending date/time of trip. Tapping the Ending label or > will open the Date Picker.

Odometer: Starting odometer of trip. Tapping the Odometer label or > will open the Distance Picker.

Ending: Ending odometer of trip, and the trip distance. Tapping the Ending odometer label or > will open the Distance Picker.

Destination: Trip destination. Tapping the Destination label or > will open the Destination Picker.

Purpose: Trip purpose. Tapping the Purpose label or > will open the Purpose Picker.

Notes: Notes on the trip. Tapping the Notes label or > will open the Notes Editor. Turn the display of this field off in the View Options if you don't track the payment type

Class: Trip classification. Tapping the Class label or > will open the Class Picker. Turn the display of this field off in the View Options if you don't track the payment type

Payment: Payment type. Turn the display of this field off in the View Options if you don't track the payment type. If you use PocketMoney for your personal finance application, then the payment type corresponds to the account name in PocketMoney for when you Post the Transaction to PocketMoney. Tapping the Payment label or > will open the Payment Picker.

Amount: The amount you paid for the trip. This might include parking or tolls.

Expense = : Calculated by adding the amount to the trip distance multiplied by the Mileage Rate set in MPG Preferences.

mph = : Trip distance divided by the length of time of the trip.

++ Duplicate button: Intelligently duplicates the current trip entry. If you choose to use the present time, then it uses the most recent odometer entry entered, and it uses the length of time and trip distance of the entry you duplicated.

\$ Post to PocketMoney: Post the current transaction to PocketMoney saving you the hassle of entering the transaction twice.

View Options: Opens the View Options screen where you can toggle the display of the Payment, Notes, Class, and Cost/Gal fields on or off.

Trash Can: Deletes the current entry.

6. Edit Service Screen

Tapping the New button on the Vehicle Service Log screen will create a new service entry and opens the Edit Service screen.

Save: Saves the transaction and returns you to the previous screen.

Cancel: Cancels any edits you've done and returns you to the previous screen.

Date: Date of service. Tapping the Date label or > will open the Date Picker.

Odometer: Odometer of service, and the distance since the last fill-up. Tapping the Odometer label or > will open the Distance Picker.

Payment: Payment type. Turn the display of this field off in the View Options if you don't track the payment type. If you use PocketMoney for your personal finance application, then the payment type corresponds to the account name in Pocket-

Edit Service	
Date	Aug 21, 2008 11:34 AM >
Odometer	71,513.0 (0.0) >
Payment	Visa >
Location	Tire Kingdom >
Amount	\$325.96
Service	Tires >

Class	>

Money for when you Post the Transaction to PocketMoney. Tapping the Payment label or > will open the Payment Picker.

Location: Where you had the vehicle serviced. Tapping the Location label or > will open the Location Picker.

Amount: The amount you paid for the service.

Service: The service you had performed. Tapping the Service label or > will open the Service Picker.

Notes & Class: Optional fields. You can turn their display off in the View Options.

++ Duplicate button: Duplicates the current service entry.

\$ Post to PocketMoney: Post the current transaction to PocketMoney saving you the hassle of entering the transaction twice.

View Options: Opens the View Options screen where you can toggle the display of the Payment, Notes, Class, and Cost/Gal fields on or off.

Trash Can: Deletes the current entry.

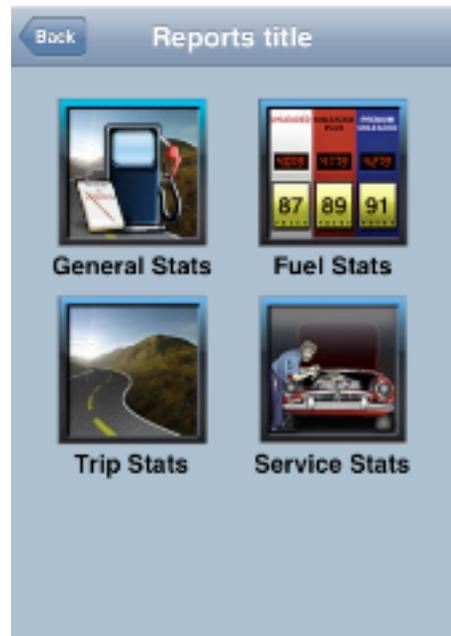

7. Reports

General Stats: Summarizes cost per mile, cost per day, total amount spent on vehicle, and other general statistics.

Fuel Stats: Breaks fuel economy out by fuel grade (octane type). Shows minimum and maximum fuel economy.

Trip Stats: Summarizes the distance, time, and expense by purpose of trip.

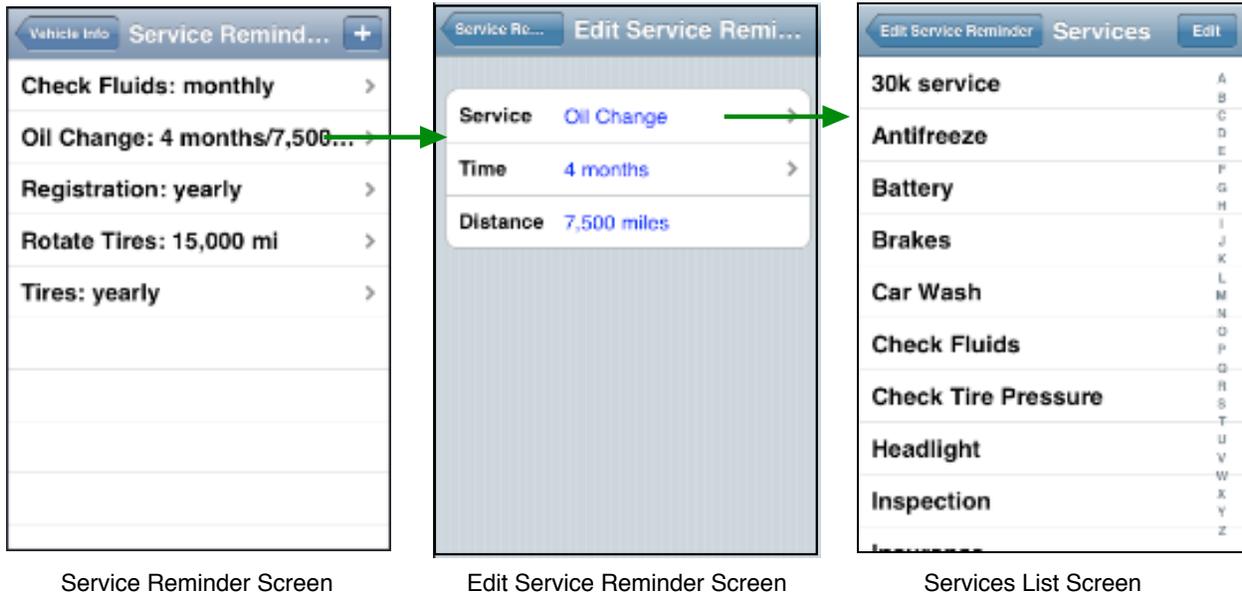

Service Stats: Shows last and upcoming service times for any services that have reminders set. Summarizes the amount spent for each service type.

8. Service Reminders

Service Reminders are checked each time you launch MPG to remind you about a service that you enter about your vehicles.

Press the Service reminders info button on the Vehicle Info Screen to open the Service Reminders screen for the current vehicle. (See section: 2. Vehicle Info Screen)

The Service Reminder Screen will initially be empty. Tap the '+' to create a new service reminder.

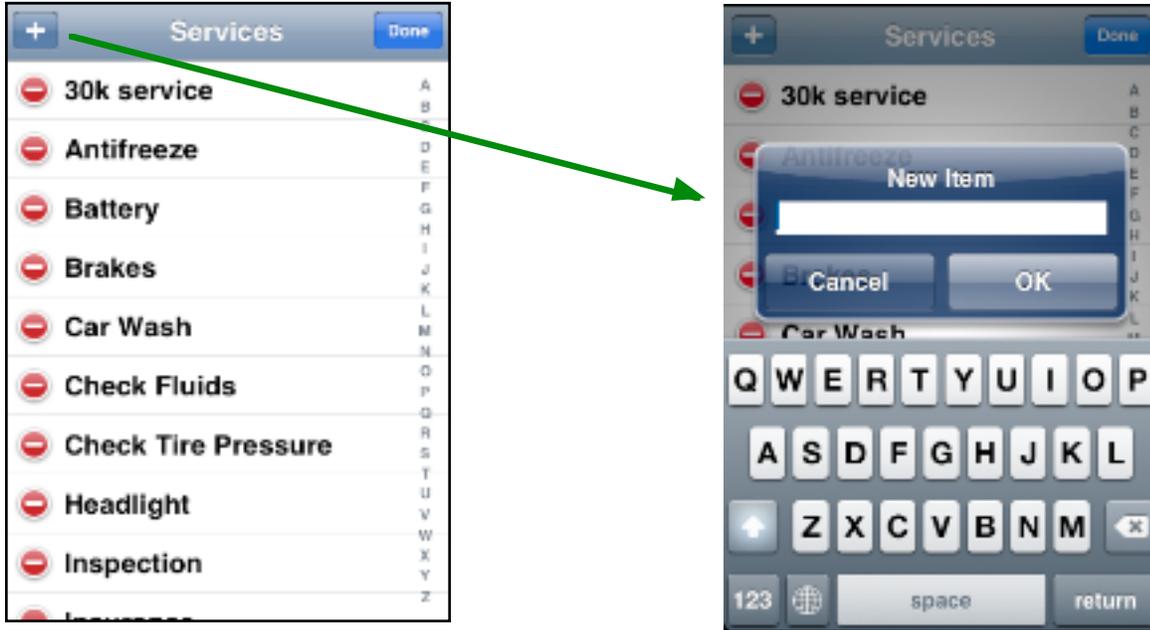

Service: Pick the service you want to set up a reminder for from the Services List Screen. Add/delete/rename services to customize the services to your usage.

Time: Choose from days, weeks, months, or years for the service reminder. Vehicle Inspection might be once a year. Check Fluids might be once a week.

Distance: The number of miles/kilometers between reminders.

Adding/Deleting/Renaming Services

Tapping Edit on the Services List Screen will switch to the editing screen. Tap the red delete button to delete services (or swipe to delete). Tap '+' to add a new service. Tap on a service name to rename it.

9. Wi-Fi Backup, Restore, Import, Export

To access the Wi-Fi File Transfers sheet, tap on the Action Button on the Vehicle List Screen.

The SyncDocs server is required to be running on your desktop computer (OS X, Windows, or Linux) so MPG can send and receive files. For directions on downloading SyncDocs visit: <http://www.catamount.com/SyncDocs.html>.

Backup to desktop...

Sends the MPGDB.sql database, the com.catamount.mpg.plist preferences file, and any images for your vehicles to the desktop.

Restore from desktop...

Deletes the current MPG database file and replaces it with what is received from the SyncDocs server. The files backed up above can be restored. You can also use Restore on MPG for Palm *.pdb files or tab delimited files (TDF) if you want to replace your current data with what you are importing.

Import from desktop...

Import MPG for Palm *.pdb files or tab delimited files (TDF). Import doesn't delete the current data so you can merge pre-existing data. Imported records are matched on the vehicle name so the vehicle name

must match exactly.

Export to desktop...

Sends a Tab Delimited Formatted (TDF) file to the SyncDocs Server. The TDF file can be opened with a spreadsheet.

Migrating your old MPG for Palm databases

(or the jailbreak version of MPG databases from iPhone 1.x) HotSync your Palm to so the most recent MPG data is backed up. Then drag and drop the MPG PDB files to the SyncDocs server window. The MPG PDB files are located in the /Palm/username/backups/ folder, or you can search for “MPG-Vehicles.pdb”, “MPG-Transactions.pdb”, “MPG-Alarms.pdb”, “MPG-Lookups.pdb”. (**The file extension must must lowercase “.pdb” or the files will be sent to the iPhone, but MPG won’t be able to import them.**)

Tab Delimited Format (TDF)

The format for the TDF files exported and imported is as follows. There are three types of records “Fuel”, “Trip”, and “Repair/Service”. Each field is separated by a Tab.

Fuel Line:

Date	Type	Vehicle	Class	Payment	Location	Odometer	Amount	Notes	Volume	Filled Tank	Fuel Type
------	------	---------	-------	---------	----------	----------	--------	-------	--------	-------------	-----------

Fuel Example:

5/7/03 9:18 AM 1.649	Fuel	Bug		Visa	Citgo	60,757.3	\$21.40		12.978	Y	87
-------------------------	------	-----	--	------	-------	----------	---------	--	--------	---	----

Trip Line Format:

Date	Type	Vehicle	Class	Payment	Location	Odometer	Amount	Notes	EndDate	EndOdometer	Purpose
------	------	---------	-------	---------	----------	----------	--------	-------	---------	-------------	---------

Trip Example:

6/20/99 1:26 PM Business	Trip	Boxster			Palm	18,809.5	\$0.00	Training	6/25/99 11:12 PM		19,620.5
-----------------------------	------	---------	--	--	------	----------	--------	----------	------------------	--	----------

Service Line Format:

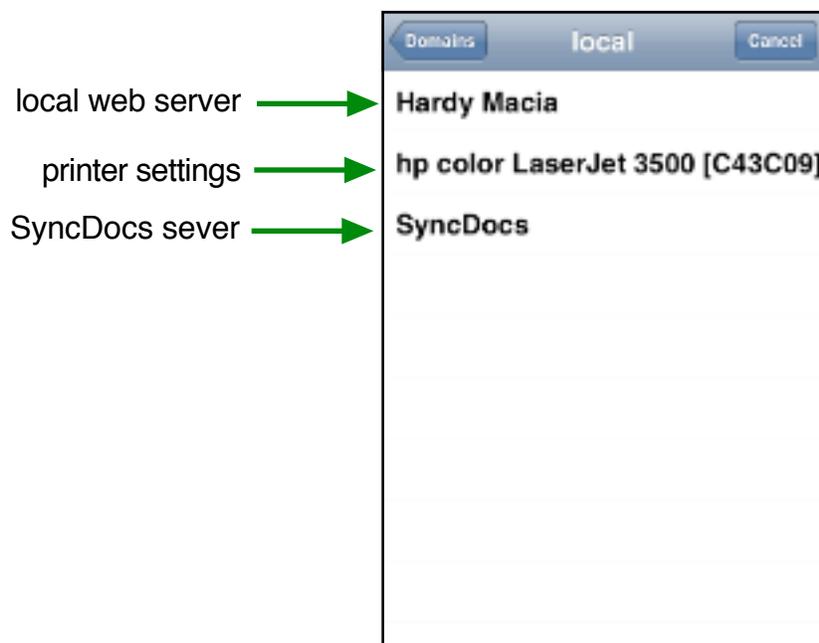

Date	Type	Vehicle	Class	Payment	Location	Odometer	Amount	Notes	Service
------	------	---------	-------	---------	----------	----------	--------	-------	---------

Service Example:

3/4/03 1:08 PM	Repair/Service	Bug		Visa	Mobil	54,043.5	\$145.23		Brakes
----------------	----------------	-----	--	------	-------	----------	----------	--	--------

***Vehicle Units on import**

The units for the vehicle are not in the import file. MPG will try to figure out the units first by checking to see if the vehicle already exists and use the units that are set for the vehicle. If the vehicle doesn’t exist, then it uses the default units for your iPhone based on your Region setting in the System Settings.

Picking the SyncDocs Server

After you choose Backup/Restore/Import/Export, then a browser window will open for you to pick the SyncDocs Server. In the SyncDocs Server settings you can name the server whatever you want. I used the default of "SyncDocs". Since SyncDocs uses Bonjour to find the server you might see other items listed. If you pick a non SyncDocs server or if you try to connect to an old version of SyncDocs server then you will get an "invalid server" error message.

Once you pick the server, then you'll get a confirmation that the files were uploaded or downloaded.

10. Preferences:

About MPG: This is where you can find the MPG version number.

Help/FAQ: Sends you to the FAQ on the catamount.com site. The FAQ contains some of the most frequently asked questions. It also has a link to this documentation.

Snooze Reminders: MPG checks for overdue service reminders every time you load the application. But, this can get annoying if you have a lot of overdue reminders, or if you run MPG multiple times a day. The default is zero days so it reminds you every time MPG is launched, but if you only want it to remind you once a day, then set this to 1 day. If you want it to remind you only once a week then set it to 7 days.

Mileage Rate: If you are reimbursed for the miles you drive either for work or for tax purposes, then MPG will calculate the expense per mile for you. The default is \$0.585 which is the IRS's standard mileage deduction for business purposes.

Fuel decimal places: In the United States fuel is sold at \$2.999 per gallon instead of \$3.00. This is from some ancient marketing scheme. Set the number of decimal places to display in the cost per gallon amounts.

Show Tenths of Miles: If you want MPG to display the tenths of miles. Most users will have this off, but some need to track tenths of miles for that fine level of granularity.

Post to PocketMoney: Enables the '\$' button at the bottom of the Edit Fill-up, Edit Trip, and Edit Services screen. You can download PocketMoney from the AppStore.

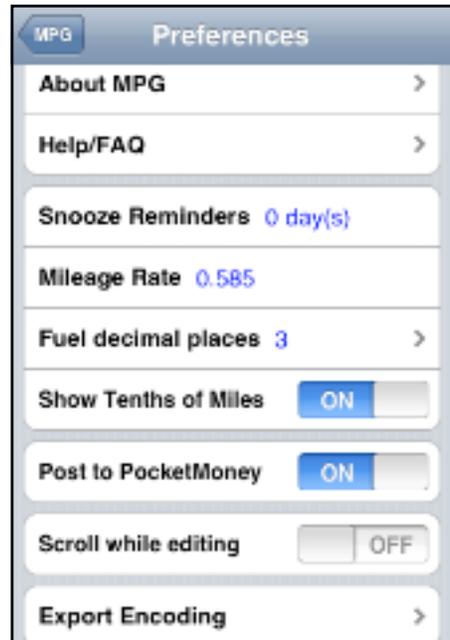

Scroll while editing: You can not scroll the screen while editing, and have the magnifying glass work at the same time. Turn this on or off to for the behavior you prefer.

Export Encoding: MPG supports three types of encoding during file exports. Most newer applications will support the UTF-16 option. If you have troubling importing the file into the application you are using then you can try the older encoding options for Windows and OS X.

Unicode (UTF-16) - chinese, japanese..

Western (ISO Latin 1) - Windows

Western (Mac OS Roman) - OS X

11. Miscellaneous

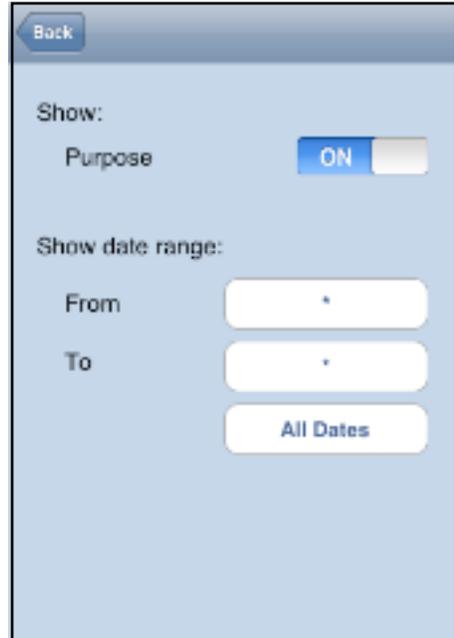

Vehicle Log View Options:

View Options allow the user to customize the display of data to how they like to work.

Show Purpose: Turn ON to display the Trip Purpose on the Trip Log Screen. Turn OFF to display the Odometer on the Trip Log Screen.

Show date range: Tap on the From and To buttons to set the date range to display in the Vehicle Log Screens. Setting the date range lets you limit the amount of data you display or use in Reports.

All Dates: Resets the From/To Date Range back to *. Showing all dates.

Date Picker:

Tapping on the Date button will use the date picker shown. Tapping on the time button will use a Date Picker that also lets you set the time.

Distance Picker:

Switching the “Distance type selector” between Odometer and Trip will let you use the Distance Wheels to change either the odometer or trip distance.
